TUESDAY 28 JUNE, MORNING

**MARK
SCHEME**

General Marking Instructions

Introduction

Mark schemes are intended to ensure that the GCSE examinations are marked consistently and fairly. The mark schemes provide markers with an indication of the nature and range of candidates' responses likely to be worthy of credit. They also set out the criteria which they should apply in allocating marks to candidates' responses.

Assessment objectives

Below are the assessment objectives for GCSE Physics

Candidates must:

- AO1** Demonstrate knowledge and understanding of scientific ideas, scientific techniques and procedures;
- AO2** Apply knowledge and understanding of scientific ideas, scientific enquiry, techniques and procedures; and
- AO3** Analyse information and ideas to interpret and evaluate; make judgements and draw conclusions; develop and improve experimental procedures.

Quality of candidates' responses

In marking the examination papers, examiners should be looking for a quality of response reflecting the level of maturity which may reasonably be expected of a 16-year-old which is the age at which the majority of candidates sit their GCSE examinations.

Flexibility in marking

Mark schemes are not intended to be totally prescriptive. No mark scheme can cover all the responses which candidates may produce. In the event of unanticipated answers, examiners are expected to use their professional judgement to assess the validity of answers. If an answer is particularly problematic, then examiners should seek the guidance of the Supervising Examiner.

Positive marking

Examiners are encouraged to be positive in their marking, giving appropriate credit for what candidates know, understand and can do rather than penalising candidates for errors or omissions. Examiners should make use of the whole of the available mark range for any particular question and be prepared to award full marks for a response which is as good as might reasonably be expected of a 16-year-old GCSE candidate.

Awarding zero marks

Marks should only be awarded for valid responses and no marks should be awarded for an answer which is completely incorrect or inappropriate.

Marking Calculations

In marking answers involving calculations, examiners should apply the 'own figure rule' so that candidates are not penalised more than once for a computational error.

Types of mark schemes

Mark schemes for tasks or questions which require candidates to respond in extended written form are marked on the basis of levels of response which take account of the quality of written communication.

Other questions which require only short answers are marked on a point for point basis with marks awarded for each valid piece of information provided.

Levels of response

Tasks and questions requiring candidates to respond in extended writing are marked in terms of levels of response. In deciding which level of response to award, examiners should look for the 'best fit' bearing in mind that weakness in one area may be compensated for by strength in another. In deciding which mark within a particular level to award to any response, examiners are expected to use their professional judgement. The following guidance is provided to assist examiners.

- **Threshold performance:** Response which just merits inclusion in the level and should be awarded a mark at or near the bottom of the range.
- **Intermediate performance:** Response which clearly merits inclusion in the level and should be awarded a mark at or near the middle of the range.
- **High performance:** Response which fully satisfies the level description and should be awarded a mark at or near the top of the range.

Quality of written communication

Quality of written communication (QWC) is taken into account in assessing candidates' responses to all tasks and questions that require them to respond in extended written form.

These tasks and questions are marked on the basis of levels of response. The description for each level of response includes reference to the quality of written communication.

For conciseness, quality of written communication is distinguished within levels of response as follows:

Level A: Quality of written communication is excellent.

Level B: Quality of written communication is good.

Level C: Quality of written communication is basic.

In interpreting these level descriptions, examiners should refer to the more detailed guidance provided below:

Level A (Excellent): The candidate successfully selects and uses the most appropriate form and style of writing. Relevant material is organised with a high degree of clarity and coherence. There is widespread and accurate use of appropriate specialist vocabulary. Presentation and spelling, punctuation and grammar (SPG) are of a sufficiently high standard to make meaning clear.

Level B (Good): The candidate makes a reasonable selection and use of an appropriate form and style of writing. Relevant material is organised with some clarity and coherence. There is some use of appropriate specialist vocabulary. Presentation and spelling, punctuation and grammar (SPG) are sufficiently competent to make meaning clear.

Level C (Basic): The candidate makes only a limited selection and use of an appropriate form and style of writing. The organisation of material may lack clarity and coherence. There is little use of specialist vocabulary. Presentation and spelling, punctuation and grammar (SPG) may be such that intended meaning is not clear.

COVID-19 Context

Given the unprecedented circumstances presented by the COVID-19 public health crisis, senior examiners, under the instruction of CCEA awarding organisation, are required to train assistant examiners to apply the mark scheme in case of disrupted learning and lost teaching time. The interpretation and intended application of the mark scheme for this examination series will be communicated through the standardising meeting by the Chief or Principal Examiner and will be monitored through the supervision period. This paragraph will apply to examination series in 2021–2022 only.

- 1 (a) (i) Average distance missing numbers: 30.0, 44.0, 59.0, 80.0, 100.0 [2]
 ($[\frac{1}{2}]$ each round down)
- (ii) Distance travelled every 50 ms 0.05 or 0.10 s is increasing or in equal time intervals [1]
- (iii) Average speed = Total distance divided by total time taken [1]
- (iv) Av. speed = $100/0.45$ [1]
 conversion of cm \rightarrow m [1]
 = 2.22 m/s [1] [3]
- (v) Final speed = $2 \times$ average speed [1]
 = 4.44 m/s [1] [2]
- (vi) $a = (v - u)/t$ [1]
 = $(4.44 - 2.00)/(0.45 - 0.20)$ ecf from (v) [2]
 = 9.76 (m/s²) [1] [4]
- (vii) The speed (or velocity) increases/by 10 m/s [1]
 every second [1] [2]

(b) **Indicative content**

Dependent variable – average speed or time (**not both**)
 Independent variable – height of ramp
 Controlled variable – mass/radius/diameter/volume/weight/density of the marble/length of the ramp/starting position on the ramp

Apparatus – tape measure/ruler/metre rule/metre stick, etc
 stopwatch/stopclock/timer, etc

Average speed versus height of ramp

Straight line through origin

Response	Mark
Candidates describe in detail using good spelling, punctuation and grammar at least 5 points shown above and the precaution is clearly stated. The form and style are of a high standard and specialist terms are used appropriately at all times.	[5]–[6]
Candidates describe in detail using good spelling, punctuation and grammar 3 or 4 points shown above. The form and style are of a high standard and specialist terms are used appropriately at all times.	[3]–[4]
Candidates make some reference to 1 or 2 of the main points shown above using satisfactory spelling, punctuation and grammar. The form and style are of a satisfactory standard and they have made some reference to specialist terms.	[1]–[2]
Response not worthy of credit	[0]

[6]

21

- 2 (a) (i) Variable resistor [1]
 Bulb [1]
 Ammeter [1]
 Voltmeter in parallel with bulb [1]
 All correct symbols as part of a circuit [1] [5]
 If not penalty [-1] applied once
- (ii) Adjust the variable resistor [1]
- (iii) Both axes labelled with unit [2]
 5 or 6 points plotted (to include 0,0) [2]
 3 or 4 points give 1
 Less than 3 points give 0
 Smooth curve [1] [5]
 ($[\frac{1}{2}]$ each round down)

- (iv) No [1]
 It is a curve/it is not a straight line through 0,0 [1] [2]

(b) (i)

Voltage/V	Current/mA	Resistance/ Ω
5	50	100

Resistance unit shown [1]
 $R = \frac{V}{I}$ [1]
 conversion 50mA \rightarrow 0.05 [1]
 $= \frac{5}{0.05}$ [1]
 $= 100(\Omega)$ [1] [5]

- (ii) Two calculations such as [2]
 40/25 = 1.6 75/40 = 1.9 100/50 = 20
 or (If mA converted to A)
 40/0.025 = 1600 75/0.040 = 1875 100/0.050 = 2000

AVAILABLE
MARKS

20

- 3 (a) = 2 N [1]
- (b) (i) Anomalies results = 0.95 [1]
Reason – very different from others or does not fit the pattern [1] [2]
- (ii) Repeat the measurement [1]
- (iii) Power = work/time or $P = W/t$ [1]
 $= (2 \times 1.2) / 0.82$ or $(2 \times 1.2) / 0.85$ [2]
 $= 2.93$ (W) $= 2.82$ (W) [1] [4]
 Allow ecf for force
- (c) (i) Identifies efficiency as 0.65 or 65% [1]
- (ii) 2.93/0.65 allow ecf [1]
4.5 (1) W [1] [2]
- (iii) useful output energy is less than input energy/
Some input energy is lost [1]
- (d) Clamp the motor to the bench [1]

AVAILABLE MARKS	
13	

- 4 (a) (i) Incident ray, Refracted ray, and Normal correctly labelled ($3 \times [1]$) [3]
- (ii) i between Incident ray and Normal [1]
- (iii) r between Refracted ray and Normal [1]
- (iv) On entry the speed decreases [2]
Changes speed gets 1
- (b) (i) i/r ratio [2]
1.7, 1.4, 1.5, 1.6, 1.6, 1.8, 2.0
All values calculated to 1 decimal place
- (ii) Ratio $\frac{i}{r}$ not a constant value [1]
- (iii) **Both** axes labelled ($i/^\circ$; $r/^\circ$) [1]
Scale covers at least half the x and y axes [1]
All points correctly plotted [2]
At least 4 points correctly plotted (Give [1])
Continuous best fit line (**through plotted points**) [1] [5]
but **Not** point to point

- (iv) Graph not a straight line [1]
